Fabric Care Pioneer

Building on a Legacy

In 1899, founders Carl Miele and Reinhard Zinkann inspected the company's first series of cream separators as they exited the assembly line. Today, the tradition continues as their great grandchildren carry out this important family ritual. For over 110 years, Miele, the largest family-owned and operated appliance company in the world, has embraced its founders' belief that success is only achievable in the long term by being totally committed to the quality of our products. Guided to this day by the motto *Immer Besser*, or *Forever Better*, more than 16,000 employees of Miele working in over 40 countries around the globe are motivated to produce products that are not only high performing, safe and easy-to-use, but also made to the highest quality standards and from the very best raw materials to create products that customers will enjoy for a lifetime of use with confidence and reliability.

At the very core of Miele's technical and production competencies are washing machines. Having more experience than almost any other appliance company on the planet, Miele has taken the washing machine in Europe, and around the world, to the highest level of durability, reliability and convenience while always remembering the product's potential impact on our cherished natural resources.

From large-capacity units that can be integrated into your laundry room cabinetry and stainless steel stacking units that stylishly fit into narrow spaces, to our super large capacity models and a diverse assortment of true commercial products, Miele's Honeycomb Care™ laundry systems offer the very best quality, reliability, longevity and cleaning performance available. We guarantee it.

Buy with Confidence

Miele UNIQUE Miele Earns Top Ratings

In independent evaluations and product comparisons for performance, reliability and longevity, Miele traditionally receives top scores. Most recently, the GfK Group, a leading global market research company, performed a thorough evaluation of more than six brands of laundry products. After putting them each through their paces, the GfK Group recorded the average replacement cycle of washing machines to be 12.8 years and 12.5 years for tumble dryers.

In this same evaluation, Miele washing machines were found to have a replacement cycle of 18.5 years, almost 45% longer than the average. Miele tumble dryers also exceeded the industry average — by almost 50% — with a recorded replacement cycle of 18.6 years.

Harmonizing Price and Value

In any economy, customers should expect — no, they should demand —

value for money. When you buy a Miele washing machine and accompanying tumble dryer, you are admittedly paying a slightly higher retail price than you would on another brand. But, remember with Miele you are acquiring so much more! In addition to the quality components, craftsmanship and garment longevity benefits of owning a Miele fabric care system, you are actually making an excellent financial decision.

It is a well-known fact that buying true quality actually represents a lower cost in the long run. In this case, the price of the product is amortized over a longer period, thus resulting in a lower annual cost. Our machines have replacement cycles that exceed the industry average and only Miele has the Honeycomb™ wash drum, proven to extend the life of your clothing.

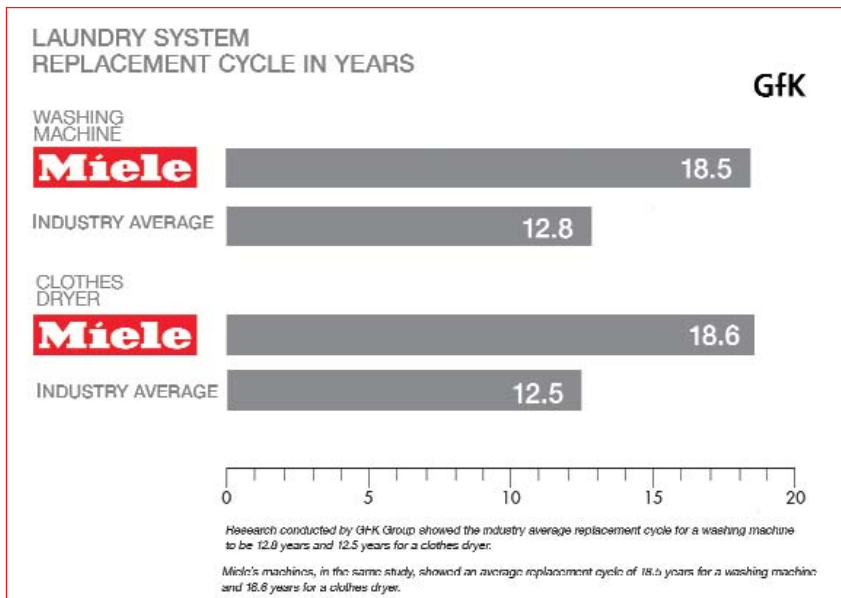

Miele UNIQUE Quality Cleaning Money Back Guarantee

In the age of marketing hype and advertising fluff, we understand that customers need true assurances that they are making a wise purchasing decision using facts and not ad agency jargon. The information provided in our brochures, on our website (mieleusa.com) and by the product specialists at authorized Miele dealerships is not part of that game. As a family-owned company, whose products proudly bear the family name and the legacy of a century old tradition founded in quality and innovation, Miele is committed to your total satisfaction.

If you are not completely satisfied that Miele's washing machine, with its revolutionary Honeycomb™ drum, is cleaning your clothing better than the machine you owned before, Miele will refund the full purchase price of the washing machine.

Miele UNIQUE Miele Supervision 24/7

Miele is proud to offer RemoteVision™ technology, which creates a 24/7 link between your appliance and our monitoring center, ensuring complete peace of mind. If a family member accidentally added too much laundry detergent, for instance, RemoteVision™ will contact you with a simple solution. Or, if a critical component was to malfunction without detection, a technician will schedule an appointment and arrive fully prepared to resolve the situation.

Unique, Patented Drum

Miele Honeycomb Care™ **UNIQUE** Technology

The key job of a washing machine is to clean and care for your clothing. Children's soccer uniforms and ballet outfits must be free from the prior day's prized grass and celebratory ice cream stains. Your everyday and business attire helps to reflect your style and personality. They must all be perfect. To get your fabrics really clean, you need a careful combination of water temperature, detergent, time and mechanical action, or lack of movement in the case

of soaking periods. Since these variables do not remain constant, different fabrics and stains require very different combinations.

For generations, Miele washing machines have been known for their thorough yet gentle care of fabrics. Miele's revolutionary Honeycomb Care™ washing drum advances this technology even further. Forged from the very best stainless steel with a unique convex pattern that

resembles a honeycomb, Miele's Honeycomb Drum™ both enhances cleaning performance and reduces fabric wear. The by-product of this patented advancement is an 80% reduction in the number of water exit holes and the skillful development of a water channel network that provides a thin water layer that actually cushions your clothes while the drum rotates. Only Miele has this Honeycomb™ technology... a technology proven to protect and extend your relationship with the fine fabrics in your wardrobe.

Tangible Asset

By reducing the size and number of water exit holes, there is virtually no chance your clothes will be damaged from snags against the stainless steel holes.

An independent study, conducted by WfK Applied Laundry Research Institute in Krefeld, Germany, proves that your valuable wardrobe will be cleaner and last up to **four times longer** if cared for in a Miele washing machine with a Honeycomb Drum™.

Master of Clean

Miele Intelligent Controls

With all of the cleaning possibilities available with Miele washing machines, surprisingly you do not need a degree in mechanical engineering to use them. Our engineers understand your needs as they relate to both common and specialty wash programs. They compiled these requirements and created a simple approach that allows you to quickly and easily select a cycle that will automatically adjust the water volume, temperature, soak and spin speeds to manage your cleaning task. Of course, there may be occasion to override Miele's programs, in which case you can customize your own program and command the machine's cycle. In essence, you have both *automatic* and *personalized* MasterCare™ controls on this piece of precision German engineering.

Behind the scenes, Miele's patented electronic controls never stop monitoring your washing machine. In total silence, key factors are being evaluated

in order to protect your family, your laundry and our cherished natural resources. First, your family is protected by an out-of-balance sensor that can detect dramatic weight shifts in the Honeycomb Drum™ during its first rotations. If a family pet, for instance, was to be accidentally included in the load, the sensor would stop the cycle and unlock the door immediately. Next, SpinClean™ ensures that larger-volume loads are cleaned thoroughly, without excess wear, by manipulating the drum rhythms to ensure superior results and longevity. And finally, Intelligent Water Intake sensors uphold Miele's century-long, global pledge to use only as much water as necessary... and not a single drop more.

True Fabric Care: At Home

Miele Custom **UNIQUE** Cleaning

Different fabrics and stains require very different combinations of water temperature and drum spin speeds. This is

why Miele laundry machines feature a wide range of intelligent programs designed to suit a specific fabric.

Standard Wash Programs

Normal

Standard program best for everyday laundry loads.

Wrinkle-Free

For permanent-press and mixed loads, the gentle drum action and high water levels minimize creasing during the wash cycle.

Sanitize

Effectively eliminates micro-organisms (such as dust mites) and bacteria. This program also reduces the allergen count in your laundry by holding a high temperature as well as high water levels.

Hand Wash

For hand-washable garments free of silk or wool.

Woolens

Even gentler than hand washing, it prevents any shrinkage or matting of wool and wool-blend items.

Silk

Designed for any hand-washable items containing silk.

Custom

You set any combination of temperature and spin speeds.

Extra White

A special combination of temperature and extra rinsing to get your whites their brightest!

Delicates

Minimizes creasing and gives extreme care to garments by using higher water levels and the gentlest possible drum action.

Specialty Wash Programs

Sturdy

Washes heavier fabrics like canvas or corduroy.

Denim / Jeans

Protects your favorite denim items from creasing and discoloration.

Dress Shirts

Cleans and minimizes wrinkling of dress shirts not containing silks.

Comforters

Ideal for down, feather or synthetic-filled comforters or pillows.

Outerwear

Preserves the garments' functionality so you can continue to be protected from anything the weather may bring.

Table Linens

This program is perfect for getting tablecloths and napkins their cleanest.

Beach Towels

A cold pre-rinse effectively removes sand from towels before the main wash begins.

Express

For quickly washing lightly soiled items.

Drain / Spin

Provides an extra drain and spin cycle.

Quick Rinse

Laundry is only rinsed and spun in this program.

Tumble Dryer Programs

Normal

Standard program best for drying everyday laundry loads.

Extra Dry

Ensures that thicker cotton fabrics (such as terry cloth) are completely dry.

Woolens

Fluffs up the fibers in woolen garments and gives them back their bounce.

Hand Iron

Ensures cotton or linen fabrics have enough residual moisture in order to facilitate ironing.

Rotary Iron

Similar to the Hand Iron setting, it leaves fabrics with even more residual moisture for easier ironing with the Miele Rotary Iron.

Delicates

For delicates such as lingerie or garments with appliques and beading.

45 Minute Warm

A non-sensor, time-based drying program which freshens cotton clothing with warm air.

15 Minute Cold

Additional non-sensor, time-based program, that is designed to air-out and fluff items which are already dry.

Woolens

Silk

Dress Shirts

Outerwear

Denim / Jeans

Table Linens

Gas and Electric Tumble Dryers

Drying Done Right

Once your fine washables have been gently and thoroughly cleaned in a Miele Honeycomb Care™ washing machine, you will want to dry them in a cutting-edge tumble dryer that does not over-heat the load and begin breaking down the garments' stability.

Lifelong Drying

You can depend on a Miele tumble dryer. The design life of the appliance is more than 5,000 cycles... that is equivalent to a 20-year life expectancy. That's a lot of drying, done right.

Miele UNIQUE The Revolution Continues

In addition to our washing machines, Miele provides tumble dryers with the groundbreaking, patented Honeycomb Drum™. Compared with the drum in the washing machine, where the hexagons point inward, the special feature in the tumble dryers is that the hexagons point outward. This unique design creates ingenious 'air cushions'. These pockets of air ensure the gentle movement of laundry and the reduction of contact friction with the stainless drum. Simply stated... the Honeycomb™ drum guarantees even drying results, while minimizing creasing and needless wear of your garments.

Technology at Work for You

Miele's gas, electric and condenser tumble dryers offer a wide range of sensor-controlled and timed drying programs with a variety of drying levels – from ready to iron to extra dry – so you can cater to all types of fabric¹. Perfect drying, without overheating and 'frying out' fabrics, is controlled by Miele's signature Touchtronic™ microprocessor. These patented, Miele-made electronics monitor everything from moisture levels to drying temperatures making adjustments as needed, when needed. Supporting the electronics is a ground-

breaking innovation in the lint filtering system. Miele's aerodynamic filter technology, on the super large capacity units, aids overall drying consistency and reduces the total dry time by keeping a continuous airflow. The result is unparalleled laundry care with more uniform drying and significantly reduced creasing... requiring less ironing.

Miele UNIQUE A Unique Solution

In all cases, the best and most effective way for a dryer to operate is with an external vent. However, a vent is not always practical or possible, especially in high-rise buildings or awkward spaces. For these situations, Miele has an excellent alternative, the condenser dryer.

A condenser dryer takes the moist air released from your laundry and mixes it with cool air. This process returns the moisture to water, which is either collected in a container or is pumped away to a drain line. Miele condenser dryers are so effective and well sealed that very little moisture escapes from the system. In fact, after conducting a rigorous test of the industry's leading manufacturers, consumer watchdog Which ranked Miele as "the most effective condenser dryer" in the marketplace. The test results revealed that Miele's condensers released the least amount of water per load and were the "most reliable brand".

Conveniently, the non-vented design allows the condenser dryer to go just about anywhere: a closet, bathroom, kitchen or, of course, a laundry room. And, as reported above, Miele dryers have the lowest moisture loss of any condenser dryer on the market. High moisture levels can lead to the growth of dangerous molds that can provoke numerous health issues.

¹Condenser tumble dryers are available exclusively in the large capacity product offering and gas-powered tumble dryers are unique to the super large capacity range.

Laundry Trio

Perfect Ironing

Do you aspire to set the most elegant table, with perfect napkins and a wrinkle-free tablecloth? Do you demand a high personal image reflected in the smart appearance of your business and casual wardrobe? If so, Miele invites you to sit and iron in comfort with the unique rotary iron. This easy-to-use appliance has a wide roller that allows you to press virtually everything from blouses and pants to bed linens and tablecloths, all with a **crisp and professional finish**.

Professional Results

Its versatile operation will enable you to give all your laundry a smart and professional finish. While the rotary iron has design features comparable to much larger, industrial machines, it has specifically been designed for home use

and can be plugged into any **110-volt** outlet. Thanks to its clever foldaway mechanism and wheels, it can easily be stored in a closet or left out in the laundry room for immediate use. This unique product **gently presses delicate lace or puts razor-sharp creases** into pants. The open end of the roller is particularly useful for ironing unusually shaped items such as shirts and blouses that can be fitted over the open end without being folded. The open end also allows for easy ironing of very wide items such as fitted or flat sheets and tablecloths.

Safe and Easy to Use

The Miele rotary iron is incredibly easy to use. The wide space between the hotplate and the roller makes it simple to

feed in the items being ironed. By gently pressing the wide foot control bar, the heater plate contacts the roller that begins to rotate. Your hands are free to guide the laundry smoothly and accurately. The unit is equipped with a special finger guard for increased safety. If, during the ironing process, your fingers come too close to the hotplate, a safety switch will automatically stop the roller rotation and lift the heater plate off the roller. Finished work is carefully deposited on the laundry shelf beneath the roller in even, soft folds. The ample space between the shelf and the roller allows for large items to be pressed.

Storage Solutions

A Place for Everything

Tailor made by Miele for the American laundry room and debuting with the launch of the super large capacity Honeycomb Care™ units are optional appliance stands. Miele's stands not only raise the washer and tumble dryer to an even more ergonomic position for superior loading and unloading, but they also serve as some very useful storage areas. These unique integrated compartments allow for the tidy storage of laundry detergents or perhaps your Miele vacuum cleaner. A foldaway tray lifts your laundry basket to the perfect level to transfer clothing to or from the machine, then simply folds back out of the way allowing unfettered access to the entire drawer.

Miele Care Collection: High-Efficiency Detergents

Highly Efficient Appliances Meet High-Efficiency Detergents

Ultimate fabric care is only possible if four vital factors are optimized for a specific load of clothing; mechanical action, chemical action, time and temperature. With well over a century of experience, leading both the residential and commercial industries through the development of new computerized technologies such as MasterCare™ controls and engineering innovations like the Honeycomb Care™ wash drum, Miele washing machines are world renowned for their gentle, thorough care of fabrics and legendary product durability.

Today, Miele debuts a full line of high-efficiency (he) detergents and specialty cleaning agents that embody the same masterful attention to detail the company has been known for since its inception in 1899. Introducing fabric care collection products by Miele.

Sensitive Skin

Like Ultra detergents, this too is a powerful, deep-cleaning formula. Sensitive Skin contains special, mild fragrances that do not irritate sensitive skin or trigger allergic reactions from allergy sufferers.

UltraWhite™

This highly concentrated, multi-purpose powder detergent with special whiteners is formulated to thoroughly remove stains and keep white or light-colored fabrics looking brilliant. A fresh fragrance of flowers and fruit is subtle, noting a high-quality clean.

UltraColor™

A unique concentrated formula with advanced brighteners that effectively removes stains, even at low temperatures. Protects vibrant colors and leaves clothing with a soft, gentle bounce feel and a hint of citrus fruit and lavender scent.

For Delicates

A remarkable high-efficiency, light-duty liquid detergent specially formulated for the gentle, yet thorough, cleaning and care of delicate textiles containing wool, silks or other unique fabric blends. Superior soil removal is achieved – even grease stains – and delicates are left with a fresh, rose-scented fragrance.

Fabric Softener

Miele's unique softener is more like a fabric conditioner, giving virtually all laundry a gentle, pleasant feel with a dash of freshness. It also helps prevent static cling in the tumble dryer.

Miele Care Collection: Special-Purpose Detergents and Agents

Unique Cleaning Formulas

In order to care for special washables made of highly complex material blends, Miele created a unique detergent and cleaning agent assortment that works effectively in the Honeycomb Care™ wash drum. This new line of products will enable you to properly clean items made from down and GORE-TEX® to fleece and a diverse range of microfibers. The Miele Care Collection also includes an effective fabric protector that reproofs synthetic or natural fibers, shielding them from the penetration of water or wind. You will be amazed with the cleaning results after just one wash load!

Down Items

This new special-purpose detergent not only effectively cleans and cares for pillows, comforters (duvets), sleeping bags and other products containing eiderdown but does so without removing natural oils. Our unique formula also reconditions the material so it maintains its elasticity making it fresh and fluffy. Only a very mild fragrance is left behind.

Sportswear

Our gentle-care detergent will deep clean and retain the color of your special sportswear articles. Ideal for fabric blends, synthetics, fleece and microfibers. This detergent also helps fibers breathe and cuts down on static. A light, fresh aroma is left.

Outdoor Clothing

Hiking gear and garments with water - or wind-proof membranes such as GORE-TEX® require very different care when washing. This detergent contains no brightener or agents that could damage typical membranes in this clothing; just a mild cleaning formula that effectively cleans and removes stains while maintaining membrane characteristics.

Fabric Protector

Miele's Fabric Protector is not a detergent... it is a high-tech, post-wash cycle reproofing agent that shields garments and textiles made from synthetic or natural fibers (in particular tablecloths, sportswear and hiking gear) from the penetration of wind and water.
