A Tradition of Quality

Miele has been a family-owned and family-run company since its inception in 1899. Managed today by the fourth generation, the company has been a pioneer in the field of premium home appliances ever since a butter churn inspired the design of its first ever washing machine in 1901. The butter churn has become Miele's icon, the epitome of the company's ongoing effort to make home living better.

Today, our research and development teams continue to pioneer the way in technological advancements to develop firsts in durability and design.

Our testing procedures are stringent, ensuring every individual part is inspected. Nothing but the highest quality appliance reaches the homes of our customers.

Miele's dedication to quality has won the hearts of consumers all over the world. We have grown over the years, and today Miele has a workforce of 16,000 employees around the globe.

Miele will continue to win the trust of consumers, seeking ways to improve your life. It will always be 'Forever Better'.

Welcome to Miele

IMMER BESSER (forever better) – our pledge

When our two great grandfathers were in the process of founding the Miele company, they had to make sure they stood apart from the competition in order to be successful. There are effectively only two ways of doing this: either by being cheaper than the rest or by being better than the rest. It is not really possible to be both at the same time.

They decided to be “better“ than the rest.

Numerous best in class awards and certificates attest to the fact that Miele has continued to renew its commitment to being “immer besser“ throughout the past 118 years. However, the millions of satisfied customers around the world are perhaps the most important endorsement.

At the heart of this success lies a continuity of values and goals which are typically only found in companies which have been family-run for generations, rather than in businesses which are guided by the often short-term interests of the stock market.

It is in this sense that Miele has embodied first-class product quality and German engineering since 1899. Miele also stands in equal measure for respect, fairness and mutual esteem towards sales partners, customers, suppliers, employees and neighbors. Buying a Miele is an environmentally friendly decision. We ensure this by using methods of production that save resources as well by producing products which set new standards in terms of their consumption of electricity, water and detergent – and save you money at the same time.*

As directors and co-proprietors of the fourth generation of our business we promise you that this will not change.

Dr. Markus Miele

IMMER BESSER

Our Brand Promise

Many Good Reasons For Choosing Miele

Here are just six of them.

Since the company was founded in 1899, Miele has remained true to its 'Immer Besser' brand promise. This means that we will do all that we can to be forever better than our competitors and forever better than we already are. For our customers this means the peace of mind of knowing that choosing Miele is a good decision – and probably the decision of a lifetime!

The Miele Brand

In many countries, Miele is the most desired brand in its field. In its German home market, Miele was even voted 'best brand ever' in 2013 across all product branches. And the ownership of products from such a brand reveals much about its users: Miele customers have high expectations for the performance, convenience, design and the environmental friendliness of their domestic appliances. People who buy Miele are quality conscious and have style!

Miele Quality

For more than 100 years it has been a proven adage that you can trust Miele and rely on our appliances. We are the only manufacturer in our branch of industry to test products such as our washing machines, tumble dryers, dishwashers and ovens to the equivalent of 20 years of use. Once a Miele, always a Miele: Miele customers around the world remain loyal to Miele and recommend Miele to others. Looking to the future, we promise not to entertain any compromises when it comes to quality and durability!

Miele Technology

Miele stands for excellent results combined with the lowest possible energy consumption. This goes for the hygienic and gentle care of your laundry, your flooring and your dishware as well as when conjuring up exquisite culinary delights. The key to this is a wealth of innovative features available only from Miele. This is borne out by numerous first places in leading product tests conducted around the world.

Miele Convenience

Whether a conventional rotary dial, discreet sensor controls or a high-resolution touch display like the one on your smartphone: operating a Miele is both easy and fun. Add to this a multitude of convenient and reliable automatic programs and a great love of detail - success is guaranteed. Make life easier for yourself with Miele!

Miele Design

Miele believes in clean lines and timeless elegance. Nowhere else will you find such a comparable range of built-in kitchen appliances, with consistency in design lines and color options, to suit the most diverse of interior designs and kitchen furniture fronts. Great care is taken to coordinate appliance design across the range. Whatever the style of your kitchen: Miele is the perfect match.

Miele Service

Miele customers enjoy complete peace of mind: thanks to our fast and efficient after-sales service operation. All designed to ensure you get the most out of your products... from day one!

BURJ KHALIFA, Dubai, VAE

RICHGATE, Shanghai, China

ONE 57, New York, New York

References Luxury Brand

“How do we live today, and how will we live in the future?” This is a question that has been tackled intensively for a number of years now. Current residential construction projects also offer intriguing responses to the question: “How can we design a high-quality living space?” Alongside increasingly differentiated layouts, entirely new types of residential property have emerged. A higher standard of service, such as that provided by an intelligent combination of functions, has also become ever more common.

Three projects that answer these questions in their own way are the Burj Khalifa in Dubai, the Richgate in Shanghai, and ONE 57 in New York City. A comparison of the projects offers entirely different architectural conceptions and occupant structures, yet there are also a number of parallels, with the individual solutions for high-quality living featuring first-class fittings and of course, Miele appliances. Several other famous real estate projects such as Eden Island (Seychelles), The Landings (St. Lucia) or Essensa (Manila, Philippines) also underline the wide variety of projects in which Miele appliances are already a perfect match to the sophisticated interior and outer design of these buildings.

Further information on these developments is available on our website (www.miele.com).

Con@ctivity 2.0

Innovative convenience: specific ventilation hoods react automatically to all settings on all Miele induction cooktops.

Con@ctivity 2.0

Wall ventilation hood DA 6690 W PURISTIC EDITION 6000

Con@ctivity 2.0

Miele's Con@ctivity 2.0 feature allows you to concentrate fully on cooking, leaving the rest up to its wireless technology. Con@ctivity 2.0 gathers information from the induction cooktop and transmits it to the ventilation hood, ensuring the hood operates at the optimum power setting based on your cooking environment. To avoid unnecessary energy consumption, once the cooktop is turned off the ventilation hood will run for up to 15 minutes, depending on what is being cooked.

Con@ctivity 2.0 can control the following functions for you:

- Switching on the hood and its lighting when the cooktop is operating
- Automatic power level adjustment – to suit your cooktop setting
- Automatic delayed shutdown times (in stages of 5 or 15 minutes)
- Automatic switch-off of the hood and cooktop lighting

If needed, you may override automatic operation or use your ventilation hood manually at any time during cooking.

Required Components

In order for Con@ctivity 2.0 to function, a network-capable Miele ventilation hood and Miele induction cooktop with Con@ctivity 2.0 must be installed together. A suitable wireless stick for the induction cooktop is supplied with network-capable ventilation hoods.

Wall ventilation hoods

How to turn your cooking area into an eye-catcher: wall ventilation hoods can be fitted in between two wall units or on their own to make a bold statement. Miele decor hoods fascinate with their clean, prominent lines and perfect craftsmanship. Make a clear statement with a puristic design in stainless steel or a combination of stainless steel and glass, a straight decor or with a bowed glass canopy – wall hoods from Miele are a highlight in every kitchen in terms of functionality and design.

Downdraft ventilation hoods

Building Miele downdraft ventilation hoods into countertops frees up space in the kitchen. Room heights or other obstructions are no longer a concern. At the touch of a button, the downdraft ventilation hood is raised and activated to extract cooking vapors and odors. When the hood is no longer in use, it simply disappears into the countertop. In terms of form and function, this appliance is a highlight amongst ventilation hoods and can be built into any kitchen design.

Built-in ventilation hoods

A highlight for minimalists: built-in ventilation hoods are invisible once installed. All that is visible is a narrow stainless steel strip beneath the upper cabinetry – the perfect fit for a purist's kitchen. The powerful flat, pull-out deflector plate extracts kitchen vapors effectively from the kitchen. And there is still space in the wall unit for a spice rack.

Range hoods

Offering the best solution for your kitchen in terms of style and function, Miele's range wall and insert hoods ensure consistent, professional results featuring perfect workmanship. It is recommended to install a range hood with baffle filtration in combination with your range or rangetop, considering the high BTU output from your cooking surface.

More than just hot air!

Our answers to your questions

How powerful does a ventilation hood have to be?

For a ventilation hood to work efficiently, the optimum air throughput for the room conditions should be established prior to purchase. Sufficient room air displacement has a positive effect on the room climate.

Ducting can reduce output. This should be taken into consideration when choosing the air replenishment rate.

Recommended:

- As few bends as possible
- Short vent ducting
- Suitable exhaust duct

What are your cooking habits?

Do you cook with only a few pans or do you like to conjure up lavish meals for which many pots and pans are required? However consuming your love of cooking may be, Miele cooktops offer you sufficient space and a suitable ventilation hood for every cooking situation. The rising vapor is filtered and air quality remains good.

Which ventilation hood is most suited for your cooktop?

Installing a ventilation hood directly above the cooktop allows for perfect vapor and steam extraction before it blends with room air. Depending on the type of cooktop and ventilation hood, the ideal installation distance between them should be observed. Fundamentally, to ensure that rising vapor is captured, the hood should be wider than the cooktop below it. Depending on the type of cooktop (electric, induction, wok, grill, etc.) it is important to take the type and technical design of the hood into consideration to achieve excellent vapor and steam removal. Miele offers numerous ventilation hood options which meet the requirements needed.

Which system is best: vented or recirculating?

This depends on a variety of factors.

Vented mode: highly efficient

Miele exhaust filters are characterized by high efficiency. The 10-ply grease filters capture grease particles excellently and remove odors effectively. The vented hood is, to a large extent, maintenance free. This ensures a good room climate.

Recirculation mode: simple to install, energy-efficient and saves ducting costs.

Today's construction and environmental requirements demand ventilation hoods which meet these requirements. Recirculating hoods are energy-efficient as warm air remains inside the room and at the same time support a good climate in the room. A pro to this option is that it can be installed in any type of kitchen.

Expert advice

Selecting the right ventilation hood depends on many factors. Your Miele dealer or local Miele Experience Center will be happy to assist you. Information on models, planning advice and locating a dealer near you is available by visiting www.mieleusa.com.
