IMPORTANT SAFETY INSTRUCTIONS

⚠️ WARNING
To reduce the risk of fire, electric shock or injury to persons while using your appliance follow basic safety precautions, including the following:

- Read all instructions before using the appliance.

GROUNDING INSTRUCTIONS
This appliance must be grounded. In the event of a malfunction or breakdown, grounding will reduce the risk of electric shock by providing a path of least resistance for electric current. This appliance is equipped with a cord having an equipment-grounding conductor and a grounding plug. The plug must be plugged into an appropriate outlet that is properly installed and grounded in accordance with all local codes and ordinances.

- WARNING - Improper connection of the equipment-grounding conductor may result in a risk of electric shock. Check with a qualified electrician if you are in doubt as to whether the appliance is properly grounded.

- Do not modify the plug provided with the appliance - if it will not fit the outlet, have a proper outlet installed by a qualified electrician.

- Do not install or use a washer with visible damage.

- Do not install or store this appliance where it will be exposed to the weather.

- Do not install your washing machine where temperatures below freezing may occur. Frozen hoses may burst under pressure. The reliability of the electronic control unit may be impaired at temperatures below freezing.
Before connecting the machine, ensure that the connection data on the data plate (fusing, voltage and frequency) match the mains electrical supply. If in doubt contact an electrician.

Do not use an extension cord to connect this appliance to the power supply. Extension cords do not guarantee the required safety of the appliance (e.g. danger of overheating).

This appliance is not designed for maritime use or for use in mobile installations such as recreational vehicles or aircraft. However, under certain conditions it may be possible for an installation in these applications. Please contact the Miele Technical Service Dept. with specific requirements.

Do not repair or replace any part of the appliance or attempt any servicing unless specifically recommended in these operating instructions.

If the power cord is damaged it must only be replaced by a Miele Service technician with a genuine Miele power cord.

Under certain conditions, hydrogen gas may be produced in a hot water system that has not been used for 2 weeks or more. HYDROGEN GAS IS EXPLOSIVE. If the hot water system has not been used for such a period, turn on all hot water faucets and let the water flow from each for several minutes before using the washing machine. This will release any built-up hydrogen gas. Do not smoke or use an open flame during this time, the gas is flammable.

Before the appliance is removed for service or discarded, remove the door.
IMPORTANT SAFETY INSTRUCTIONS

Use

➤ Do not allow children to play on or in the appliance. Close supervision is necessary when the appliance is used near children.

➤ The drum door glass will be hot when washing at very high temperatures. Do not touch the glass. Danger of burns! Keep children away from the washer when in use.

➤ Only use the washing machine to wash items which are specified by the manufacturer to be machine washable on the fabric care label. Any other applications may be dangerous.

➤ Do not wash articles that have been previously cleaned, washed, soaked or spotted with gasoline, dry-cleaning solvents or other flammable substances. These articles give off vapors that could ignite or explode. Do not add these items to the wash load.

➤ Do not add gasoline, dry-cleaning solvents, or other flammable or explosive substances to the wash water. These substances give off vapors which could ignite or explode.

➤ Do not use cleaning solvents on or near the machine or the controls. Contact with cleaning solvents will damage the surface.

➤ Do not reach into the appliance if the drum is moving.

➤ Do not tamper with the controls.

SAVE THESE INSTRUCTIONS
Caring for the environment

Disposal of the packing material
The cardboard box and packing materials protect the appliance during shipping. They have been designed to be biodegradable and recyclable.

Ensure that any plastic wrappings, bags, etc. are disposed of safely and kept out of the reach of children. Danger of suffocation!

Disposal of your old appliance
Electrical and electronic appliances contain valuable materials. They also contain certain substances, compounds and components which were essential for the proper functioning and safe use of the equipment. Handling these materials improperly by disposing of them in your household waste can be harmful to your health and the environment. Therefore, please do not dispose of your old appliance with regular household waste and follow local regulations on proper disposal.

Consult with local authorities, dealers or Miele in order to dispose of and recycle electrical and electronic appliances. Miele assumes no responsibility for deleting any personal data left on the appliance being disposed. Please ensure that your old appliance is kept away from children until removal. Observe safety requirements for appliances that may tip over or pose an entrapment hazard.

Display function

The display allows you to operate and select various functions of the washer.

Selection and display of program settings

- Temperature selection
- Spin speed selection
- Delay start
- Display of an approximate program running time

Program selection using the display

By pressing the MasterCare button, you can select from the following programs:

- Extra White
- Delicates
- Denim / Jeans
- Dress shirts
- Pillows
- Outerwear
- Table linens
- Beach towels
- Express
- Drain / Spin
- Quick rinse

Menu buttons

Various settings can be made with the Menu buttons.
The values above the vertical line can be adjusted and/or confirmed.

Example:

<table>
<thead>
<tr>
<th>Duration:</th>
<th>1:02 h</th>
</tr>
</thead>
<tbody>
<tr>
<td>Warm</td>
<td></td>
</tr>
<tr>
<td>Max spin</td>
<td></td>
</tr>
</tbody>
</table>

Pressing the left menu button Warm allows to adjust the temperature. The High spin button allows you to adjust the spin speed.

Example:

<table>
<thead>
<tr>
<th>MasterCare</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Extra White</td>
<td></td>
</tr>
<tr>
<td>OK</td>
<td></td>
</tr>
</tbody>
</table>

With the ▼ button additional programs can be selected and confirmed with the OK button.
Before using for the first time

⚠️ The appliance must be correctly installed and connected before the first use. Please see the "Installation instructions."

This washing machine has undergone thorough testing in the factory, there may be some residual water in the drum from this process.

Running a spin cycle before the first use is, for safety reasons, not possible. To activate the spin cycle a wash program must be run without laundry or detergent.

- Turn on the water supply.
- Press the I-On / 0-Off button. The washer is turned on.

The Welcome screen shows once the washer is turned on for the first time.

The Welcome screen will not show after the washer has run for more than 1 hour.

The display now shows the language setting.

### Setting the display language

The default setting for the display language is German. The display language can be adjusted.

```
Language

deutsch

OK
```

- Select the desired language by pressing the left menu button ▼
- Confirm the setting with the right OK button.

### Shipping strut reminder

⚠️ The shipping struts must be removed before the first use to avoid machine damage.

- Confirm that the shipping struts have been removed by pressing OK.

The washer is now ready for the first use.

### Starting the first wash program

- Press the program button Sanitize.
- Press the Start button.

Once the program has finished the first use is complete. The washer can be used.
1. Prepare the laundry

- Empty all pockets.

⚠️ Foreign objects left in pockets (e.g., nails, coins, paper clips, etc.) can cause damage to clothes and the machine.

**Sort the laundry**

Only wash items that are labeled machine washable by the manufacturer. Most garments have a fabric care label in the collar or side seam.

- Sort the laundry by care label and color.

**Tip:** Dark fabrics often bleed the first few times they are washed. They should be washed separately several times before being included in a mixed load.

**Pre-treating stains**

- Badly soiled areas, stains etc. should be cleaned as soon as possible, preferably while still fresh. Dab stains with a damp light colored cloth. Do not rub!

⚠️ Solvent-based cleaners (e.g., benzene) can damage plastic parts. When pre-treating a stain, make sure that plastic parts do not come into contact with cleaning agent.

⚠️ Chemical (solvent-based) cleaning agents can cause damage in the washing machine. Never use such cleaning agents in the washing machine!

**General tips**

- Curtains: Remove any lead weights or strips before washing.
- Loose bra underwires should be removed or sewn in place before washing.
- Close zippers, hooks and eyelets before washing.
- Comforter covers and pillowcases should be fastened to prevent small items from rolling inside of them.

Do not wash items with the 🔄 symbol on the fabric care label.
2. Load the laundry

Turn on the washer

Press the I-On / 0-Off button.

The washer is turned on and The drum light is on.

Tip: The drum light turns off automatically after five minutes. To turn the light on again press the Door button.

Load the laundry

Press the Door button.

The drum door is open.

Load the laundry loosely into the drum.

For best results, wash mixed loads of small and large items. This will improve washing effectiveness and help distribute the load evenly.

Water consumption and energy usage are determined by the size of the load.

The washer automatically adjusts the amount of water to conserve water and energy when washing smaller loads. The time remaining will automatically be adjusted to reflect a shorter wash program.

To prevent damage to the door seal and clothing, make sure that there are no clothes caught between the drum door and the seal.

Close the drum door.
3. Select a program

A. Program selection using program buttons

- Press the button to select the desired washing program.
- The relevant indicator light will light up.

B. Program selection via the MasterCare button

- Press the MasterCare button.
- The following appears in the display:

  ```
  MasterCare
  Extra White
  ▼ OK
  ```

- With the left button ▼, page down through the selection list.
- The desired program is on the display:
- Confirm the program with the right button OK.
4. Selecting program settings

Select a temperature and/or spin speed

Programs via program buttons

<table>
<thead>
<tr>
<th>Duration: 1:02 h</th>
<th>Warm</th>
<th>Max spin</th>
</tr>
</thead>
</table>

Press the left menu button Warm to change the temperature and press the right menu button Max. Spin to change the spin speed.

Programs via the MasterCare button

<table>
<thead>
<tr>
<th>Duration: 1:16 h</th>
<th>Extra White</th>
<th>Max spin</th>
</tr>
</thead>
</table>

Press the left menu button Hot to change the temperature and press the right menu button Max. Spin to change the spin speed.

Select an option

Select the desired Option with the respective button.

Once an Option is selected, the indicator lights.

Tip: If an Option cannot be selected, the wash program does not permit it. See the "Program Guide" to determine which Option is selectable for each program.

Heavy Soil

For heavily soiled laundry or stubborn dried on stains.

A pre-wash takes place and the wash time for the main wash is extended.

Extended

For laundry with normal to heavy soiling or stains.

The main wash cycle time for the wash program is extended.
4. Selecting program settings

Sensitive
An additional final rinse washes away detergent residue and scents.
An additional rinse takes place.

Buzzer
A buzzer signals the end of the wash program or after Hold. The buzzer sounds until the washer is turned off. The buzzer volume can be adjusted.

Adjusting the buzzer volume
No program is selected.

- Press the "Buzzer" button until the display shows:

  ![Volume setting]

  ![Volume setting]

- Press the left menu button ▶ to adjust the buzzer volume.
- Confirm with OK.

Switching on delay start
The start of a program can be delayed from 30 minutes up to 24 hours.

- Switch on the delay start (if desired).

  Please see "Delay start" for more information.
5. Add detergent

Front loading washing machines require special high efficiency detergents. Closely follow the requirements of the detergent manufacturer.

Use detergent according to the laundry soiling.

Use less for smaller loads.

Light soiling
No soiling or stains are visible.

Normal soiling
Some visible soiling or a few light stains.

Heavy soiling
Very visible soiling or stains.

Use the Heavy soil function and split the detergent in the Heavy soil compartment as described.

Too little detergent may cause:
- laundry to not be cleaned effectively and become gray and stiff over time.
- grease to not be completely washed from the laundry.
- calcium deposits on the heater.

Too much detergent may cause:
- oversudsing with poor wash, rinse and spin results.
- a higher water usage, because of an extra rinse which is automatically added
- a higher environmental burden.
5. Add detergent

Using liquid detergent

- Pull out the detergent dispenser drawer and add detergent to the compartments.

**Detergent for Heavy Soil**

Only add detergent ($\frac{1}{3}$ of the total amount recommended) to the compartment, if the Heavy Soil option is selected

**OR**

**Bleach**

Add bleach to compartment according to the manufacturer's specifications.

Do not use the Heavy Soil option.

Once the main wash cycle has finished the bleach will automatically be rinsed from the compartment.

**Detergent for the main wash**

- Fabric softener or liquid starch

- Close the detergent drawer.

Use of bleach

Bleach removes stubborn stains.

Observe the following prerequisites:

- Use liquid detergent. Heavy-duty powder detergent already contains a bleach and thus the use of an additional liquid bleaching agent is not recommended.

- Do not select the Heavy Soil option. If this option is selected, the bleach will be prematurely added.

Dispensing of bleach

Only use when the insert for liquid detergent is in place. The Heavy Soil option may not be selected.

- Fill the bleach in the compartment according to the manufacturer's specifications.

The bleach is added automatically after the main wash.
5. Add detergent

Using powder detergent

Liquid detergent inserts come already inserted in the detergent compartments. To use powder detergent remove the inserts.

■ Remove the inserts from both compartments

Tip: Replace the inserts in the compartments before using liquid detergent.

Dispensing fabric softener or liquid starch

Fabric softener
Makes fabrics feel softer and reduces static cling in the dryer.

Mild liquid starch
A synthetic starch wash that gives fabrics some stiffness.

Starch
Gives the fabrics stiffness and volume.

■ Add the fabric softener, mild liquid starch or starch to compartment. **Do not exceed the maximum fill level marked inside the compartment.**

The fabric softener / liquid starch will be dispensed during the final rinse. A small amount of water will remain in the compartment at the end of the program.

If starching frequently, clean the dispenser compartment and especially the siphon tube.
Press the flashing Start button.

If the delay start is set, the remaining times elapses in the display. Once the delayed start time has elapsed or immediately after the program start, the approximate program running time is displayed. The overall program time may be shortened or lengthened.

Additionally the sequence cycle is displayed. The washer shows the current program step.

The drum light turns off once the program starts.

Activate the Child Lock (if desired)

The Child Lock can be activated to prevent a child from canceling the program and opening the door at the end of a program.

- Press and hold the Heavy soil button until the display shows: Locked

Deactivate the Child Lock

- Press the "Heavy soil" button until the display shows: Ready to use

Tip: Once the program has finished, the Child Lock must be deactivated.
6. Start the program - Program end

Program end

During the "Anti-crease" program the display shows Anti-crease alternating with End.

- Open the drum door.
- Remove the laundry.

Check the drum for any missed pieces of laundry. Items inadvertently left in the washer may be damaged (e.g. shrink or discolor) during the next wash cycle.

- Check the folds of the door seal for any small articles.
- Close the drum door.
- Activate the Child Lock.

So children or animals do not find their way into the drum.

The final spin speed can be reduced, if the program allows changes. The selection of a final spin speed higher than that shown above is not possible.

Rinse and interim spin

There is a spin cycle after the main wash and between the rinses. A reduction in the final spin speed will also reduce the interim spin speed.

Hold

The laundry will not be spun and will remain suspended in the final rinse water. This reduces creasing if the laundry is not going to be removed from the drum immediately after the end of the program.

- Under the spin speeds, select Hold.
  - Start final spin
    At the end of the program, the washing machine will offer the maximum permitted spin speed. You can select a lower spin speed.
    - Press the Start button.
    The final spin is carried out.
  - End program without spinning
    - Press the Cancel button.
    The water is drained and the program is ended.

No spin (deselect rinse and interim spin and the final spin)

- Under the spin speeds, select No spin.
The laundry is not spun between the rinse cycles and the end of the program. The water is drained and the anti-crease function is activated.
**Delay Start**

Delay start allows you to delay the start of a program from 30 minutes up to a maximum of 24 hours.

- Press the **Delay** button.

- With every touch of the **Delay** button, the start is delayed longer:
  - For a delay less than 10 hours, the delay time extends in 30 minute increments.
  - For a delay time more than 10 hours, the delay time extends in 1 hour increments.

**Tip:** Press and hold the **Delay** button to speed up the count.

**Cancel**

- Press the **Cancel** button.

**Adjust**

- To adjust the Delay Start time cancel and reset.

Changing the programme sequence

Canceling a program
A program can be canceled any time after the program start.

Press and hold the Cancel button until the display shows:

Cancel

The wash water will be drained away.

To add or remove laundry
Open the drum door.

To select another program
The display requests the program selection.

Press the desired program button.

Interrupting a program

Turn the washer off.

To continue:

Turn the washer on again.

Changing a program
A program change is not possible once the program has started. The program must be canceled.

Adjusting the temperature
The temperature can be changed up to 6 minutes after the program start.

Adjusting the spin speed
The spin speed can be adjusted anytime until the beginning of the final spin.

Adjusting the options
The options Extended or Sensitive can be selected or deselected up to 6 minutes after the program start.

The Buzzer option can be selected or deselected at any time.
Changing the programme sequence

Adding/removing laundry during a wash program

- Press and hold the door button until the door opens.
- Add or remove laundry.
- Close the door.

The program continues automatically.

Note:

Once the program has started the washer can not make adjustments of the load size.

The drum door cannot be opened if:

- the water temperature is greater than 130 °F (55 °C).
- the water level is too high.
- the program has reached the "Final Spin".
- The Child Lock function is activated.

If you attempt to open the door while the washer is in one of the above statuses "Machine locked" will appear in the display.

Preparing your appliance for an extended vacation

If you elect to turn off the water to your home for an extended period of time, please note that this may not be enough to reduce the risk of a leak.

To be completely safe, you must turn off the water supply to each individual appliance. This means under the sink for a dishwasher, at the laundry bib for your washer, etc.
Front-loading washing machines require high efficiency detergent. Observe the manufacturer’s specification.

Miele offers detergent that has been perfectly adapted to your washing machine.

**Fabric softener**
Makes fabrics feel softer and reduces static cling in the dryer.

**Mild liquid starch**
A synthetic starch wash that gives fabrics some stiffness.

**Starch**
Gives the fabrics stiffness and volume.

**Dyes / dye removers**

⚠️ **Do not use** dye removers in this washer!

The use of dyes in the washer is recommended only to a degree of usual household use. The salt used for dying may corrode the stainless steel with frequent use.

Use only as directed by the manufacturer.

Cleaning and care

Cleaning the drum

Washing at low temperatures and/or using liquid detergent can cause bacteria and unpleasant odors to build up in the washing machine. For this reason, Miele recommends that the washing machine be cleaned once a month.

- Do not put laundry in the washing machine.
- Select the Sanitize program and the Sanitize temperature.
- Add ¼ cup of detergent and/or bleach to the detergent dispensing drawer
- Start the program and let it proceed as usual.

At the end of the program, the cleaning of the drum is completed.

Cleaning the exterior and control panel

- Before cleaning or maintenance, disconnect the power supply by unplugging the unit or manually "tripping" the circuit breaker.
- Do not use a hose to wash down the washer.

- Clean the exterior of the washer with a mild solution of non-abrasive detergent or soap and water, and wipe dry with a soft cloth.
- Clean the drum with a stainless steel cleaner specially formulated for use in a washing machine, available from Miele.

Cleaning the detergent dispensing drawer

Washing at low temperatures and the use of liquid detergent can lead to a build-up of bacteria in the detergent dispensing drawer.

- For hygiene reasons, clean the entire drawer at regular intervals.

- Pull out the detergent drawer as far as it goes. Press down on the red release lever and pull the drawer out of the machine.
- Remove the liquid detergent inserts
- Clean the detergent drawer with warm water.

Do not use chemical solvents, abrasive cleaners, glass or all purpose cleaners! They will damage the surface.
Clean the siphon tube

1. Remove the siphon tube from the compartment and rinse under warm water. Clean the pipe on which the siphon tube is attached.

2. Replace the siphon tube.

Clean the siphon tube and fabric softener channel more often when frequently using liquid starch. Liquid starch tends to stick.

Cleaning the niche of the detergent drawer

Using a bottle brush remove any detergent or lime deposits from the water inlet valves at the top of the detergent drawer niche.

Cleaning the liquid detergent inserts

Push the insert apart and remove the siphon for easy cleaning.
Cleaning the water inlet filter

The washing machine has two filters to protect the water inlet valve. These filters should be checked every six months or so, or more often if there are frequent interruptions to the water supply.

- First turn off the faucet.
- Unscrew the inlet hose from the faucet in a clockwise direction using a screwdriver (if necessary).
- Remove the rubber seal 1 from the connector.
- Using needle nose pliers, take hold of the plastic filter bar 2 and remove it.
- Rinse the filter under running water carefully remove all coarse particles.
- Put the filter and seal back into place.

Leaking can occur if the screw connections are not tightened. After cleaning, turn on the water supply and make sure the screw connections are watertight. If water leaks, tighten the screw connections.

Dirt particles in the water can damage the washing machine. The filters must be put back in place after cleaning.
Problem solving guide

With the help of the following guide, minor faults in the performance of the appliance, some of which may result from incorrect operation, can be put right without contacting Miele Service. This will save time and money.

The following guide may help you to find the reason for a fault, and to correct it. You should, however, note the following:

⚠️ Repairs and other work by unqualified persons could be dangerous. The manufacturer cannot be held responsible for unauthorized work. Repair work to electrical appliances must only be carried out by a suitably qualified and competent person in strict accordance with current local and national safety codes.

Frequently asked questions

Opening the drum door during a power failure

- Turn off the washing machine.

There is a tool behind the detergent drawer control panel for opening the access panel to the drain filter.

- Remove the tool.

- Use it to open the drain filter.

Blocked drain outlet

If the drain outlet is blocked, a large quantity of water (up to 6.6 gallons (25 liters)) can remain in the washing machine.

- Slowly and carefully unscrew the drain filter to let the water out. Be careful not to release too much water at once. If the flow of water is too strong, some water can seep into the washing machine base and activate the water protection float switch. This will prevent the washing machine from functioning.

- Tighten the drain filter back up again if you need to interrupt the flow of water.

Draining the washing machine

- Place a suitable container under the access flap.

When draining water from the machine, do not unscrew the drain filter completely or take it all the way out.
Once the flow of water stops:

- Remove the drain filter completely.
- Clean it thoroughly.
- Remove any foreign objects (e.g. buttons, coins, etc.) and lint from the filter housing. Turn the impeller by hand to check that it rotates freely.
- Put the drain filter back in place and secure it.

⚠️ Make sure the drain filter is securely tightened. Otherwise there is a risk of water leakage during use.

To avoid loss of detergent, pour approx. 2 quarts (2 liters) of water into the detergent dispenser drawer after cleaning the drain filter. Excess water will be pumped out automatically before the next wash program.

**Opening the drum door**

⚠️ Make sure the machine is turned off and the drum has stopped moving. A moving drum is dangerous.

- To open the door, pull down on the ring in the upper right corner of the access area.

## Installation

### Installation site

A concrete floor is the most suitable surface for the washer. Concrete floors are less prone to vibration during the spin cycle than wooden floors.

**Note:**

- The machine must be leveled and securely positioned.
- To avoid vibration while spinning, the machine should not be installed on soft floor coverings.

If the installation must be performed on a wooden floor:

- Install the unit on a 2 ft. x 2 ft. x 1 \(\frac{3}{16}\)" (61 x 61 x 3 cm) plywood base. Ideally the base should be large enough to span several joists and should be anchored to the joists and not just the floor boards.

**Tip:** It is best to install the washer in the corner of a room, where the stability of the floor is at its greatest.

**Warning:** There is a risk of the washing machine falling off a raised platform. If the machine is installed on a raised platform (concrete or masonry), it must be secured in place using the MTS floor mounting kit (available from Miele).

### Installation

Use the front washer feet and the rear excess end to transport the washer from its shipping pallet to the installation site.

**Do not lift the washer by the drum door!**

Ensure that the machine’s feet and the floor are dry to prevent slippage during the spin cycle.

### Removing the shipping struts

1. Pull off the shipping strut covers and
2. then use a screwdriver to release the catches at the top and bottom.

- Remove the left and right covers.
Using the wrench supplied, turn the left-hand shipping strut 90°, then withdraw the shipping strut.

Turn the right-hand shipping strut 90°, then withdraw the shipping strut.
If the holes are not covered, there is a risk of injury. To avoid the risk of injury the holes for the shipping struts must be covered after they have been removed.

- Fit the covers onto the holes.

- Secure the shipping struts to the back of the washing machine. Make sure the top catch is located above the holder.

The washing machine must not be moved without the shipping struts in place. Store the shipping struts. They must be refitted if the machine is to be moved again (e.g. when moving house).

Refitting the shipping struts

Refitting is carried out by reversing the procedure.
Leveling the machine

The washing machine must stand perfectly level on all four feet to ensure safe and proper operation.

Incorrect installation may increase electric and water consumption and may cause the machine to move about.

Screwing out and adjusting the feet

The four adjustable screw feet are used to level the machine. All four feet are screwed in when the machine is delivered.

- Use a level to check that the washing machine is standing level.
- Hold foot 1 securely with a pipe wrench. Turn counter nut 2 again using the wrench supplied until it sits firmly up against the housing.

There is a danger of the washing machine moving about. All four counter nuts must be firmly up against the housing. Please also check this for the feet which did not need adjustment.

- Using the wrench supplied, turn counter nut 2 in a clockwise direction. Then turn counter nut 2 together with foot 1 to unscrew.
Installation

Water connection

The water protection system

The Miele water protection system protects all parts of the washing machine and its surroundings from water damage.

The system consists of the following main components:

– the inlet hose
– the electronic module and drainage and overflow protection
– the drain hose

Inlet hoses

– Protection against the hoses bursting

The inlet hose can withstand pressure of more than 7,000 kPa / 1,015.26 psi.

Electronic module and washing machine housing

– Sump: Any leaking water is collected in a sump in the base of the machine. A float switches off the water inlet valves, preventing any more water from flowing into the machine and water in the suds container is pumped away.

– Overflow protection: This prevents the washing machine taking in too much water. If the water level exceeds a certain level, the drain pump switches on and pumps the excess water away in a controlled way.

Drain hose

The drain hose is protected by a ventilation system which prevents the washing machine from being emptied completely.
The washing machine can be connected to a portable water supply. A non-return valve is not needed unless required by building code.

The washing machine has $\frac{1}{2}$" (13 mm) pressure hoses with $\frac{3}{4}$" (19 mm) female hose thread connections. If there is no water hookup, contact a plumber to install a connection. Make sure that the sealing ring is seated properly on the hose connector.

Replace the hose only with a genuine Miele hose, or with a hose able to withstand up to 145 psi (10,000 kPa) pressure. The water valve connector must also be able to withstand 145 psi (10,000 kPa).

⚠️ The bolted connection is under water pressure. Open the water supply slowly to check for leaks. Adjust the rubber seal and the bolted connection if necessary.

To protect the inlet valve, the two filters (one at the pressure hose / valve connection and one at the inlet connection to the solenoid valve) must not be removed.

**Hot and cold water connection**
This washing machine can be operated with cold water and/or hot water.

**Markings of water intake hoses**

- **Cold water** = Blue stripes
- **Hot water** = Red stripes

⚠️ For technical reasons, the washing machine **must** always be connected to cold water.

**Cold water**

- The washing machine must be reprogrammed for operation with cold water **only**.
- Attach the second inlet hose to the back of the washing machine.
- In the **Cottons** washing program, the only possible temperature is **Not Heat**.
Installation

Hot water
- The washing machine is programmed for hot water operation at delivery.

- The temperature of hot water at the faucet must not exceed 140°F (60°C). The preferred temperature is 131°F (55°C). Consult a plumber if the temperature at the faucet exceeds 140°F (60°C).

- Before connecting to the water faucet, check that the outflow of cold water does not exceed 5 liters / 5 quarts. Each additional quart of cold water reduces the energy efficiency.

- If the hot water supply is turned off for some time, the washing machine will automatically switch to the cold water connection. This safety measure is not intended for the permanent operation of the appliance. The washing machine continues to wash using hot water operation, but washing results are worsened.

Reprogramming to cold water operation
Press the Sensitive button until the following appears in the display:

<table>
<thead>
<tr>
<th>Water intake</th>
</tr>
</thead>
</table>
| **Hot + cold**

Press the left menu button ▼ until **Cold** appears in the display and confirm this with the right menu button OK.

Drainage
The 5 ft (1.5 m) drain hose may be connected as follows:

1. Directly into a sink: hook the hose over the edge of the sink and secure it firmly (e.g. by tying the hose to the water faucet).

2. To a stand pipe: place the drain hose into a 1 ½" (4 cm) stand pipe and secure it firmly.

3. To a floor drain: The machine is equipped with an air gap / anti-siphoning system so that no minimum drain height is required.

   - The machine drains using a pump with a maximum delivery height of 4 ft (1.2 m).

   - Make sure there are no kinks in the drain hose.

   - If necessary, the drain hose may be extended to run a maximum of 16 ft (4.9 m), as long as the 4 ft (1.2 m) height is not exceeded. Hose extensions are available from Miele as an optional accessory.
Electrical connection

GROUNDING INSTRUCTIONS
This appliance must be grounded. In the event of a malfunction or breakdown, grounding will reduce the risk of electric shock by providing a path of least resistance for electric current. This appliance is equipped with a cord having an equipment-grounding conductor and a grounding plug. The plug must be plugged into an appropriate outlet that is properly installed and grounded in accordance with all local codes and ordinances.
WARNING – Improper connection of the equipment-grounding conductor can result in a risk of electric shock. Check with a qualified electrician or service representative if you are in doubt as to whether the appliance is properly grounded.
Do not modify the plug provided with the appliance; if it will not fit the outlet, have a proper outlet installed by a qualified electrician.

ELECTRICAL INSTRUCTIONS
This installation should be performed by an experienced and qualified technician, in accordance with local codes and regulations.
The washing machine is supplied with a 5' 3" (1.6 m) long, 3 wire cord, ending in a NEMA 5-15P plug, ready for connection to a 120 V, 15 A, 60 Hz, AC power supply.
The proper outlet can be purchased from an electrical supply dealer.

The display can be set to appear in one of several different languages. The display language can be changed at any time as long as no program is in progress.

- Press the *Extended* button until the display shows the following:

<table>
<thead>
<tr>
<th>Language</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>english</td>
<td>✓</td>
</tr>
</tbody>
</table>

- Scroll through the selection list with the left button ▼ until the desired language appears in the display. Confirm the language with the **OK** button.

The selected language appears in the display.
Please have the model and serial number of your appliance available before contacting Technical Service.
