Cleaning and care

The cleaning process is finished when "Process complete" appears in the display:

1. Turn off the coffee machine and take out the water container.
2. Place the water container under the coffee machine. Turn on the coffee machine for one second. The descaling process will now start.
3. The water container must carry through the descaling process carefully with clean water.
4. The cleaning process cannot be canceled once it has started. The program will otherwise be canceled and the water container must be cleaned with the Original Miele cleaning agent for milk pipework.
